DETAILED ACTION

Response to Arguments

Applicant's arguments, see Request for Reconsideration, filed July 14, 2003, with respect to the rejection(s) of claim(s) 17 and 22-28 under 35 U.S.C. 102(b) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Woodside, 5,972,503.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 17 and 22-28 are rejected under 35 U.S.C. 102(e) as being anticipated by Woodside 5,972,503, for reasons of record.

Woodside teaches a composite strand, performs and composite articles molded therefrom as required by claims 17 and 22-24. The composite strand comprises at least one strand of a fibrous carrier substrate, at least one layer of a chemical treatment comprising a catalyst applied to the surface of the fibrous carrier substrate and at least one layer of a binder resin applied to the outer layer of said chemical treatment, wherein the binder resin is of the type contemplated by applicants in claim 24. See abstract and

column 4, lines 45-64, column 5, lines 26-31, column 20, lines 40-56 and column 21, lines 1-3. Moreover, it is the examiner's position that since the matrix resins of Woodside are of the type set forth by applicants, properties such as the acid value are within the range contemplated by applicants as well and thus are inherent. In addition, Woodside teaches that his roving comprises reinforcing fibers and composite strands as set forth by claims 26 and that the rovings can be chopped into pellets, as required by claims 27 and 30, wherein the chopped pellets have a length within the range set forth by applicants in claim 28. See column 8, lines 51-64, column 10, lines 24-30, and column 34, line 65 through column 35, line 5.

Therefore, the prior art teachings of Woodside anticipate the invention as claimed in present claims 17 and 22-28.

Allowable Subject Matter
